

Martin Pneumatic Ball and Roller Vibrators Series UCV / UCVR

- Rotary vibration
- Nominal frequency 6750 min⁻¹ to 19900 min⁻¹ (ball) - 9800 min⁻¹ to 12300 min⁻¹ (roller)
- Force output 110 N to 34345 N (ball) - 490 N to 14130 N (roller)
- Cast iron body
- Frequency and force adjustable by air pressure

Applications

UCV / UCVR vibrators are used for moving material from hoppers. The rotary action is ideal for moving product down chutes. The cast iron body makes them suitable for underground use.

Design

Precision machined ball / roller is driven around a hardened race by air pressure. Adjusting the pressure changes the frequency and force output.

Operating Conditions

Drive medium:

Compressed air with filter and with lubrication

Operating pressure:

200 kPa to 600 kPa

Ambient Temperature;

-20 to 150° C

-20 to 180° C with air bleed

VSS offers the accessories required for the mounting, installation and control of vibrators and interval impactors.

VSS provides provides solutions. Consult our experienced application technicians.
